FREE UV coating on all canvas prints

No Mounting:

This is not mounted. Prints on canvas or photo paper that are not mounted will be shipped in a sturdy cardboard shipping tube. Orders with a large volume of prints may be shipped flat if the print's size is not too large for a box.

*Framing and matting are also available.

Studio Mount:

This method is used when you may want to frame or just hang it up immediately. Approximately 1 inch of the image on every side will wrap around therefore the image itself will need to be slightly larger than the mounting framework. The frame thickness is 3/4 inch.

Museum Mount:

These prints are on a mounting frame with a thickness of 1-1/2 inch deep. This method is used when you do not plan to place your print in a frame but want to hang it up immediately. Approximately 1-3/4 inch of the image on every side will wrap around therefore the image itself will be printed slightly larger than the mounting framework.

UV Coating:

All of our canvas prints are protected with professional photo lacquer with UV inhibitor. The result is a vivid ultra-high quality canvas that will last for a lifetime. Matte coating on all canvases unless specified gloss coating with order.
